(54) WASHING BAG AND FLOATING PIECE FOR WASHING BAG

(57) Abstract:

PROBLEM TO BE SOLVED: To wash laundry in suspended floating condition without twisting nor entangling to wash up cleanly by forming an integrated washing bag by binding each one side of plural washing bags with overlapped parts, and attaching a float at the overlappingly bound part of the integrated washing bag.

SOLUTION: One side of plural washing bags 1 is overlapped and bound to constitute an integrated washing bag 2, and a float 4 is provided at a part 3 where plural washing bags 1 are overlappingly bound. At this time, a float container 5 is attached to the part 3 where plural washing bags 1 are overlappingly bound, and the float 4 is removably contained in this float container 5. In using, namely, in washing, laundry is divided by kind and contained in each washing bag 1, and the integrated washing bag 2 is put into the washing tank of a washing machine with the float

upside. Washing with the integrated washing bag 2 in suspended floating condition in the washing tank eliminates twisting and entangling of laundry to wash up cleanly.
